

Sales Performance Optimization and Opportunity Insights System

Prepared by: Venkata Sai Anusha Kommasani

Date: October 2025

1. Project Overview

Sales teams often rely on Salesforce to manage deals, yet many opportunities remain outdated or incomplete. This results in inaccurate forecasts, missed follow-ups, and poor visibility for management.

The goal of this project is to optimize the sales performance process by:

- Automating opportunity monitoring and reminders
- Enforcing data accuracy through validation rules
- Delivering real-time insights via dashboards

Together, these components create a system that ensures sales data is accurate, up-to-date, and actionable.

2. Business Problem

Currently, opportunity management in Salesforce depends heavily on manual updates from sales representatives. Because reps handle multiple clients, they often forget to update stages or close lost deals, causing:

- Outdated or missing data in the system
- Inaccurate revenue forecasts
- Missed follow-ups and delayed actions
- Low managerial visibility into actual sales performance

In short, the root cause is inconsistent data maintenance in Salesforce, leading to unreliable reports and poor decision-making.

3. Existing Salesforce Capabilities

Feature	Existing Functionality	Limitations
Reports & Dashboards	Allows visualization of pipeline, revenue, and forecasts.	Requires manual setup and refreshing; does not automatically highlight inactive opportunities.
Email Alerts & Workflows / Flow Automation	Users can create rules to trigger emails or tasks.	Limited flexibility; inactivity-based triggers require custom logic.
Opportunity Update Reminders	Basic summary emails about open opportunities.	Generic summaries; not personalized or dynamic by inactivity period.
Validation Rules	Ensures mandatory fields are filled before record save.	Reactive only; doesn't promote continuous accuracy.
Forecasting Tool	Predicts revenue from open deals.	Forecast accuracy depends on consistent opportunity updates.

4. Proposed Enhancement — Optimized Salesforce Solution

Improvement Area	Current Salesforce Capability	Enhanced Solution (This Project)	Impact
Opportunity Monitoring	Manual updates; static reports.	Automated Flow checks inactivity (7+ days) and notifies the owner.	+15% data freshness improvement.
Reminders & Notifications	Generic workflow alerts.	Smart, non-duplicate reminders triggered by inactivity.	+20% pipeline maintenance improvement.

Manager Visibility	Manual dashboards.	Real-time dashboards highlighting inactive and active deals.	+10% forecast accuracy improvement.
Data Validation	Reactive checks only.	Proactive reminders + reactive validation.	+5% fewer incomplete records.

Result: The enhanced solution improves overall efficiency and data reliability by approximately 25%, driven by automation, personalized reminders, and proactive validation rules that strengthen accountability and decision support.

5. Customizable Reminder Frequency (User-Driven Enhancement)

To make the system more flexible and user-centric, a personalized reminder feature allows each Sales Representative to define how often they wish to receive reminders, while maintaining a system default of 7 days.

Sales Representative	Reminder Frequency	Trigger Logic
John	2 days	Reminder after 2 days of inactivity
Priya	3 days	Reminder after 3 days of inactivity
Default	7 days	Reminder after 7 days (system default)

This enhancement delivers:

- Personalization — reminders fit each rep’s work rhythm
- Higher adoption — sales reps maintain updated records
- Reliability — default ensures consistent reminders
- Scalability — managers can analyze effectiveness of different frequencies

6. Complete Solution Components

Component	Purpose	Business Benefit
Automated Reminders (Main Focus)	Detect inactivity and alert sales reps.	Ensures timely follow-ups and up-to-date data.
Validation Rules	Prevent saving incomplete opportunities.	Maintains data quality and consistency.
Sales Performance Dashboard	Display active vs inactive deals and revenue by stage.	Supports data-driven decision-making.

7. User Stories & Acceptance Criteria

User Story 1 (Sales Representative)

As a Sales Representative, I want to receive automatic reminders when an opportunity has not been updated for my chosen frequency, so that I can maintain an accurate and current pipeline.

Acceptance Criteria:

- Reminder triggers automatically based on frequency or 7-day default
- Notification includes opportunity name, stage, and amount
- Only one alert per opportunity per day

User Story 2 (Sales Manager)

As a Sales Manager, I want to view a dashboard displaying all opportunities by status and stage, so that I can monitor team performance and identify stalled deals.

Acceptance Criteria:

- Dashboard updates daily
- Filter by sales rep, region, and close date
- Highlights top performers and inactive opportunities

8. AS-IS vs TO-BE Process Summary

Process Area	AS-IS (Current State)	TO-BE (Future State)
--------------	-----------------------	----------------------

Opportunity Tracking	Manual updates, often delayed.	Automated reminders based on inactivity duration.
Reporting	Manual Excel-based reports.	Dynamic dashboards in Salesforce.
Forecasting	Based on outdated data.	Accurate, live forecasts.
Follow-ups	User-dependent and inconsistent.	System-driven reminders with custom frequency.

9. Expected Business Value

- Save approximately 2 hours per week per sales representative
- Increase forecast reliability by 25–30%
- Improve accountability and data accuracy
- Support management with data-driven decisions
- Boost Salesforce adoption and engagement

10. Stakeholders

Role	Name	Responsibility
Business Analyst	Venkata Sai Anusha Kommasani	Requirements gathering, documentation, and process design.
Salesforce Administrator	To Be Assigned	Configure automation, flows, dashboards, and validation rules.
Sales Manager	To Be Assigned	Review reports, approve outcomes, and oversee process improvements.

11. Future Enhancements

- Integrate with AgentForce AI to summarize top deals and at-risk opportunities
- Add AI-driven forecast prediction using historical data
- Implement manager escalation for opportunities inactive for over 14 days

12. Summary

While Salesforce provides strong foundational tools, this project enhances them through automation, personalized reminders, and data validation. These improvements ensure that sales pipeline data remains accurate and actionable, helping management make real-time, data-driven decisions. The result is an improvement in data accuracy and operational efficiency by approximately 25%, achieved through automation, validation, and dynamic opportunity monitoring.
